CODING SYSTEM FOR CITATION AND ABSTRACT NUMBERS

Each citation and/or abstract number appearing in the indexes contains a two-digit prefix. Because this publication consists of a compilation of mycological abstracts and reference citations from the two parent publications, *Biological Abstracts* and *BioResearch Index,* the prefixes before each number are used to denote the parent publication.

Numbers carrying the prefix 49 or 50 specify abstracts or citations reproduced from *Biological Abstracts*. Such index numbers are guides to the corresponding abstracts in this publication. Those numbers carrying the prefix 68 or 69 represent bibliographic references from *BioResearch Index* for which no abstracts have been published, and are guides of the bibliographic source in the appropriate section of this publication.

THE INTRODUCTORY GUIDE TO VOLUME 3 (1969) ABSTRACTS OF MYCOLOGY SUBJECT INDEX

Significant words used by authors to characterize their work are retrieved and arranged by computer with remarkable speed. These keywords are positioned alphabetically to include additional subject words preceding and following the featured word. Several modifying words help to locate pertinent references on the subject being searched. For example, a paper titled "The fatty acids of phycomycetes and the significance of the linoleic-acid component" would appear alphabetically under the keywords: fatty-acids, phycomycetes and linoleic-acid. The modifying words would appear on both sides of the keyword for each of the listings. To enhance indexing value, non-significant words are omitted in the ordering, while additional keywords are added editorially to titles which do not provide adequate descriptors for thorough indexing.

Each entry in the Subject Index is indexed also according to the subjects in context emphasized (Cross Subject Finder), the organism studied (Biosystematic Index) and the authors. In addition, each entry is cited either in the Abstracts section or the Bibliography (see Coding System, p. iii). Abstracts of papers cited in the Bibliography are not published but are stored on microfilm. Copies of these abstracts are available on request and are accessible for search services conducted by BIOSIS.

Typographic Variations

Computers printing out copy for the topical subject index are limited in number and variety of characters. Only Arabic numerals and upper case letters are available. There are no Greek letters, subscript or superscript numerals, symbols or punctuation marks. Consequently, the following adjustments and substitutions should be noted.

1. Chemical symbols, names and elements, radicals and compounds (with the exception of selected abbreviations such as DDT) are written out in full, as in "beta-glucuronidase" for "β-glucuronidase" and Sodium-chloride" for "NaCl."
2. When superscript or subscript numerals are required, they may be hyphenated as "iodine-131" for "I^{131}."
3. Greek letters are spelled out.
4. Substitutions are used for missing symbols.

SYMBOL USED	INDICATES
	end of title
(period)	decimal point

Ditto marks and quotation marks are omitted.

Editorial Management of Keywords

A keyboard for purposes of machine programming is considered to be a set of characters preceded and followed by a space. On this basis, certain terms traditionally written as one compound word can be split into several elements, thereby providing multiple information entries. A space separating parts of names causes each entry to be indexed separately. "Ribo nucleotides" and "deoxyribo nucleotides" would be ordered alphabetically under "r" and "d" and through a separation of elements both would appear under "nucleotides," thus visually emphasizing naturally related terms.

Conversely, organisms or terms commonly written as two or more words may be indexed as a unit by inserting a hyphen between parts. "*Histoplasma capsulatum*" would be written "*Histoplasma-capsulatum*" to prevent the separate entry under "*capsulatum*."

Affiliated drugs are classified according to the categories listed in the 17th edition of the United States Pharmacopeia.

Certain lengthy keywords including chemicals and affiliations which frequently appear in the titles of abstracts are abbreviated in the subject index. In addition to these abbreviations, ENZ (enzyme), and INST (instrumentation, methodology and apparatus) are inserted in front of appropriate terms to provide additional aids in searching. Among the more common abbreviated words are those listed below.

ABBREVIATIONS

ACTH	adrenocorticotropic hormone
ADP	adenosine diphosphate
ADPASE	adenosine diphosphatase
ALGIC	algicides
AMP	adenosine monophosphate
ANOM	anomaly
ANTI/HIST	anti/histamine
ANTI/INFECT	anti/infective
ANTI/INFLAM	anti/inflammatory/agent
ANTI/PARASIT	anti/parasitic
ATP	adenosine triphosphate
ATPASE	adenosine triphosphatase
AUTONOMIC	autonomic drug
BCG	bacille Calmette Guerin
CARBONIC ANHYDRASE INHIB	carbonic anhydrase inhibitor
CARCINO	carcinogen
CARDIO VASC	cardio/vascular
CDP	cytidine diphosphate
CENT DEPRESS	central depressant
CENT STIM	central stimulant
CMP	cytidine monophosphate
CTP	cytidine triphosphate
DEAE CELLULOSE	diethylaminoethyl cellulose
DERMATOL	dermatological
DDT	dichlorodiphenyltrichloroethane
DFP	diisopropylphosphorofluoridate
DIAGNOS	diagnostic
DNA	deoxyribonucleic acid
DNASE	deoxyribonuclease
DOPA	dihydroxyphenylalanine
DOPAMINE	dihydroxyphenethylamine
DPN (or DPN+)	diphosphopyridine nucleotides (NAD)
DPNH	reduced diphosphopyridine nucleotide
ECHO	enteric cytopathogenic human orphan (virus)
EDTA	ethylenediaminetetraacetate
ENZ	enzyme
F	form (following a specific name only

ABBREVIATIONS (Continued)

FAD	flavine-adenine dinucleotide
FMN	flavine mononucleotide
FUNGIC	fungicides
GASTRO/INTEST	gastro/intestinal
GDP	guanosine diphosphate
GMP	guanosine monophosphate
GTP	guanosine triphosphate
HEMATOL	hematologic
HERBIC	herbicides
IAA	indoleacetic acid
IDP	inosine diphosphate
IMMUNOL	immunologic
IMP	inosine monophosphate
INSECTIC	insecticides
INST	instrumentation, apparatus and methods
IR	infra-red
ITP	inosine triphosphate
METAB	metabolic
MONOGR	monograph
NAD (or NAD+)	nicotinamide adenine dinucleotide
NADH	reduced nicotinamide adenine dinucleotide
NADP (or NADP+)	nicotinamide adenine dinucleotide phosphate (TPN)
NADPH	reduced nicotinamide adenine dinucleotide phosphate
NEMATIC	nematicides
PESTIC	pesticides
pH	log of the reciprocal of the hydrogen ion concentration
PHARM-ADJUNCT	pharmaceutical-adjunct
PPLO	pleuropneumonia-like organisms
RADIOPROTEC	radioprotectorant
REV	review
RNA	ribonucleic acid
RNASE	ribonuclease
SP	species (following a generic name only)
SSP	subspecies (following a specific name only)
TDP	thymidine diphosphate
TEAE CELLULOSE	triethylaminoethyl cellulose
TERATO	teratogen
TMP	thymidine monophosphate
TPN (or TPN+)	triphosphopyridine nucleotide (NADP)
TPNH	reduced triphosphopyridine nucleotide
TTP	thymidine triphosphate
UDP	uridine diphosphate
UMP	uridine monophosphate
USA	United States of America
USSR	Union of Soviet Socialist Republics
UTP	uridine triphosphate
UV	ultra violet
VAR	variety (following a specific name only)

(The "M", "D", "G", or "P" following a plant taxon or common name indicate monocotyledon, dicotyledon, gymnosperm or pteridophyte.)
